ITupside Polls

Business Need

I want to quickly poll my website visitors to get their opinion on a topic, subject or other item.

ITupside Solution

ITupside Polls presents the customer with a question and a list of multiple-choice answers. It provides instant feedback to the website visitor, while also recording their answers for you to review at a later date. It is an easy to use and powerful Online Suggestion Box.

ITupside Polls Product Description

Existing ITupside customers can create and manage their Polls by selecting *Polls* in the ITupside Polls administration tool. For non-ITupside customers, an ITupside Poll can be easily inserted into any website using an ITupside-provided script tag.

Poll questions and responses are defined using a simple entry form in the ITupside Polls administration tool. A Poll question can have a single set of responses or multiple sets of responses, allowing a single question to be re-used. Questions and responses can also have a start date and time and/or stop date and time, so that the Poll can be scheduled for a specific period. This allows the Poll to begin and/or end automatically without further intervention.

When the website visitor selects a response, the Poll display changes to show the percentage of votes to date for each response using a color bar graph. This provides the customer with instant feedback. At the same time, their response is added to a running total that may be viewed by you at any time in the ITupside Polls administration tool.

Typical Uses of ITupside Polls

- Collect customer opinions on a sponsored event.
- Discover customer opinions concerning a proposed change prior to implementation.
- Get direct feedback on your new or existing menu offerings.
